

## **Elk River and Freshwater Creek Sediment TMDL Community Meeting #2**

North Coast Regional Water Quality Control Board staff invite landowners and interested persons to discuss development of water quality protection measures for the sediment impaired Elk River and Freshwater Creek watersheds. Watershed-specific protection measures will be established through development of sediment Total Maximum Daily Loads or TMDLs. The agenda includes: a TMDL development update, a discussion with CONCUR, Inc., an organization actively facilitating dialogue between watershed stakeholders, and an overview of the implementation plan developed for the Garcia River Sediment TMDL. Meeting participants will have an opportunity to ask questions and provide suggestions regarding the development of both the Elk River and Freshwater Creek TMDLs. The meeting will be held **July 30, 2002, 7-9 PM at the Agricultural Extension Service Building, 5630 S. Broadway in Eureka.** For information about the TMDLs or the meeting, please contact Adona at 707-576-2672 or Matthew at 707-576-2499.
